EDUCATION

Rajiv Gandhi University of Knowledge Technologies

B.Tech in Computer Science and Engineering

2024 – 2028

CGPA: 8.42 / 10.0

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Java

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Authentication & Authorization

Databases & Storage: MongoDB, Redis, AWS S3

Cloud & DevOps: AWS, NGINX, Linux, Git, GitHub, CI/CD Basics

Core CS: Data Structures & Algorithms, Operating Systems, Computer Networks, OOP, DBMS

PROJECTS

Storage App | *MongoDB, Express.js, React.js, Node.js, AWS S3, Razorpay* | [GitHub](#)

- Engineered a scalable cloud-based file storage platform (inspired by Google Drive) supporting secure multi-user file uploads, downloads, and retrieval backed by **AWS S3** for distributed object storage.
- Designed and implemented **RESTful APIs** for file management and access control; integrated **session-based authentication** with **GitHub and Google OAuth** for secure, streamlined user login and identity management.
- Built password-protected shareable link generation system, enabling granular access control over shared resources without exposing raw object URLs.
- Integrated **Razorpay payment gateway** for seamless premium subscription flows; optimized backend API response times for efficient large-file handling and concurrent user sessions.

Shortly – URL Shortener with Analytics | *TypeScript, Node.js, Express.js, MongoDB, Redis, NGINX, React.js* | [GitHub](#)

- Architected a **distributed URL shortener** in TypeScript designed for high-concurrency workloads, implementing horizontal scalability with **NGINX load balancing** across multiple service instances.
- Integrated **Redis caching** layer for hot-URL lookups, significantly reducing redundant database read operations and improving average redirect latency under peak traffic conditions.
- Built a real-time **link analytics dashboard** tracking click events, geolocation, referrer data, and traffic trends, enabling data-driven usage insights for end users.
- Implemented modular, service-oriented backend architecture following **scalable system design principles**; exposed authenticated RESTful APIs supporting analytics, link management, and user sessions.

ACHIEVEMENTS

Key Accomplishments

- GenAI Hackathon Runner-Up** – Secured **2nd place** and **Rs. 15,000 cash prize**; led both frontend and backend development under a time-constrained, team-based environment.
- LeetCode** – Solved **100+ problems** with focus on Data Structures, Algorithms, and problem-solving patterns relevant to backend systems and distributed computing.
- Developed and shipped multiple **student-focused full-stack applications** as part of Coding Club initiatives, addressing real-world campus operational challenges.

POSITIONS OF RESPONSIBILITY

General Secretary – Coding Club

2024 – 2025

Rajiv Gandhi University of Knowledge Technologies

- Led a team of developers in designing and shipping full-stack campus utility applications, overseeing architecture decisions and end-to-end delivery from requirements to deployment.
- Organized technical workshops, coding competitions, and mentorship sessions, fostering a culture of collaborative engineering and continuous learning across 100+ student members.
- Drove club-wide adoption of version control workflows (Git/GitHub) and collaborative development best practices across all active projects.
